

PERSONAL PROTECTION SYSTEM (PPS)

Ensures that the vehicle detects, slows down and stops for floor-based obstacles in its path. Two or three rotating laser scanners are mounted on the vehicle near floor level, at positions chosen for the widest possible combined field of view.

INCREASE SAFETY

RAE Automated High Level Storage

Our automated vehicles are equipped with multiple components and software to ensure a safe driverless operation.

- Vehicle detects, slows down and stops for floor-based obstacles.
- Onboard monitoring system carries out constant safety checks.
- Sophisticated sensors standard and optionally available such as: obstacle detection sensors to detect and stop for non-floor based obstacles as well as different stop devices and alarm functions.
