

# TMHE CHEMICAL COMPLIANCE LETTER

(Updated 23.04.2024)

### Introduction

The REACH (Registration, Evaluation, Authorization and Restriction of Chemicals) regulation is the main EU law which purpose is to improve the protection of human health and the environment through identification of certain chemicals. The legislation applies to all suppliers (inside and outside Europe) who sell, import or manufacture articles, i.e. chemicals and/or products containing certain chemicals, within the European Union. REACH entered into force on June 1, 2007.

Since 2021, there is also a reporting obligation towards a database (SCIP) owned by ECHA (European Chemicals Agency). This obligation originates from an update in Article 9(1)(i) in the Waste Framework Directive which refers to Article 33(1) in REACH.

### Definitions

Substances of Very High Concern: Substances that have serious and often irreversible effects on human health and the environment are identified as Substances of Very High Concern (SVHC). These substances are presented in the Candidate List of Substances of Very High Concern for Authorisation (Candidate List) provided by REACH and updated twice every year.

**Article:** As defined in ECHA's Guidance on requirements for substances in articles\*: An article is an object made from one or more substances or mixtures which were given a specific shape, surface or design during the production process. Further, an article will remain an article, even though articles are assembled or joined together, until they become waste.

**SCIP:** Database established in the Waste Framework Directive (2008/98/EC) and managed by ECHA. Articles identified on the Candidate List containing 0,1% or more of the weight by weight shall be reported to the SCIP database. The aim of SCIP is to decrease the use of hazardous chemicals, increase the knowledge of hazardous chemicals and encourage to replace for less hazardous chemicals in articles throughout the whole life cycle. The obligations of SCIP were included as an update in Article 9(1)(i) in the Waste Framework Directive (WFD).

### Communication

#### REACH obligations:

TMHE has an obligation to inform customers of articles containing SVHC included in the Candidate List in a concentration of >0.1 weight-%. Producers are obliged to provide recipients of the article with, as a minimum, the name of the substance to allow safe use.

#### WFD (SCIP) obligations:

Articles with substances identified on the Candidate List shall be reported to the SCIP database owned by ECHA. This obligation applies to all actors in the supply chain that put an article on the market.

#### Our approach

**Code of Conduct for Suppliers:** At Toyota Material Handling Europe (TMHE) we are committed to being the first choice partner for all customers looking for materials handling solutions. We will do this by providing high-quality, innovative products, services and added-value solutions while using resources in a sustainable, socially, and environmentally responsible manner. To prove our reliability and commitment to Corporate Social Responsibility (CSR) throughout the entire value chain of our operations we ask all our suppliers to agree with our Code of Conduct for Suppliers. This contains following requirements regarding management of substances of concern:

*Suppliers shall comply with any applicable laws and regulations such as REACH and RoHS prohibiting or restricting the use or handling of specific substances. To ensure safe handling, movement, storage, recycling, reuse, and disposal, Suppliers shall identify, manage and list Substances of Concern as required by each TMHE entity (any presence of such substances shall be reported via prescribed reply form) and comply with applicable labelling laws and regulations for design, manufacturing, recycling and disposal.*

**Commitment:** At TMHE we are committed to the EU's objectives to reduce the number of substances of concern and fulfil transparency towards our customers. This is met by providing the content of this document publicly and the ongoing awareness raising efforts with customers on the topic of sustainability continues.

#### SAFE USE INSTRUCTIONS

If not stated otherwise, the identification of Candidate List substances shall be sufficient to allow safe use of the article throughout the whole life cycle including service life, disassembly and waste/recycling stage. When relevant, specific instructions for safe use are stated in the comment column.
